

## AL 518 ITAS (Not Available in Canada)

This automatic lock and tilt back model is designed to meet the most demanding requirements of the specialized tire market. All positioning functions are automated for a quick and safe operation. Main features are a three position bead breaker with an opening of up to 18", table top bead seating and tire inflation system, as well as a dual directional turn table. The tilt back tower reduces tower flex when doing low profile tires.

## BL 512 ITAS

Swing arm style tire changer with three position bead breaker with an opening of up to 18". Ideal for large volume shops. Is equipped with a table top bead seating and tire inflation system, as well as a dual directional turn table.

## BL 512 IT

A smaller and more economical version of the BL 512 ITAS. Bead breaker opening to 12". Is equipped with a table top bead seating and tire inflation system, as well as a dual directional turn table.

## TechnoRoller 3

This device had been specially designed to speed up and simplify the mounting and demounting of those difficult low profile and run flat tires. The rollers and helper bar assist to press the upper bead into the rim channel (Drop Center) during mounting and raising the lower bead for demounting. Can only be adapted to tilt back tower models.
